Title: Vulnerability and Singapore's Globalization Strategy

Introduction: Small states are characterized by small territorial size, small population and limited resources, which inevitably produce vulnerability, dependence and marginality. Although the constraints of national scale exist objectively, in the era of globalization, small states applying successful strategies can not only get rid of the survival predicaments, but also realize prosperous development, or even leap from the "edge" to the "center". Within this context, Singapore is a decent example to explain how small states prosper and develop under certain vulnerabilities. We are going to explore Singapore's national problems arising from its geographical conditions and its globalization strategy to overcome the vulnerability.
